

Thank you for choosing MCD Electric Conversion Kit.

CAUTION

Use extra caution while connecting the Lipo batteries because of high discharge capacity. Please read the battery and ESC instructions carefully.

For ESC set-up refer to manufacturer instructions.

Mechanical braking is used in order to extend the battery life. To use the mechanical brake a 3 channel, throttle-brake mixing option radio control is required. Please refer to Radio Control instructions.

CAUTION

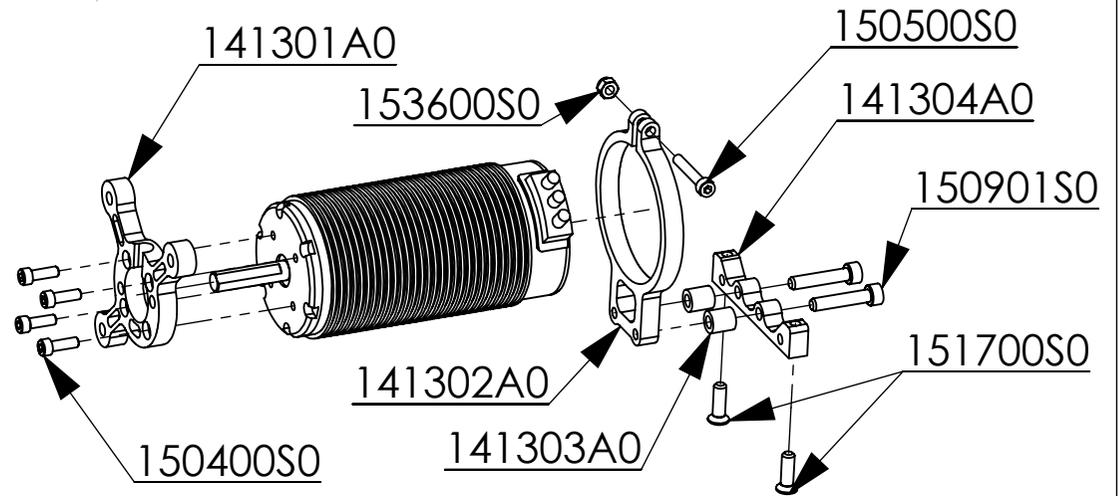

When mechanical brake option is used make sure you disable the braking and reverse options from ESC.

We recommend 2X 6S Lipo batteries connected in parallel (22,2 V) as shown on the picture above.

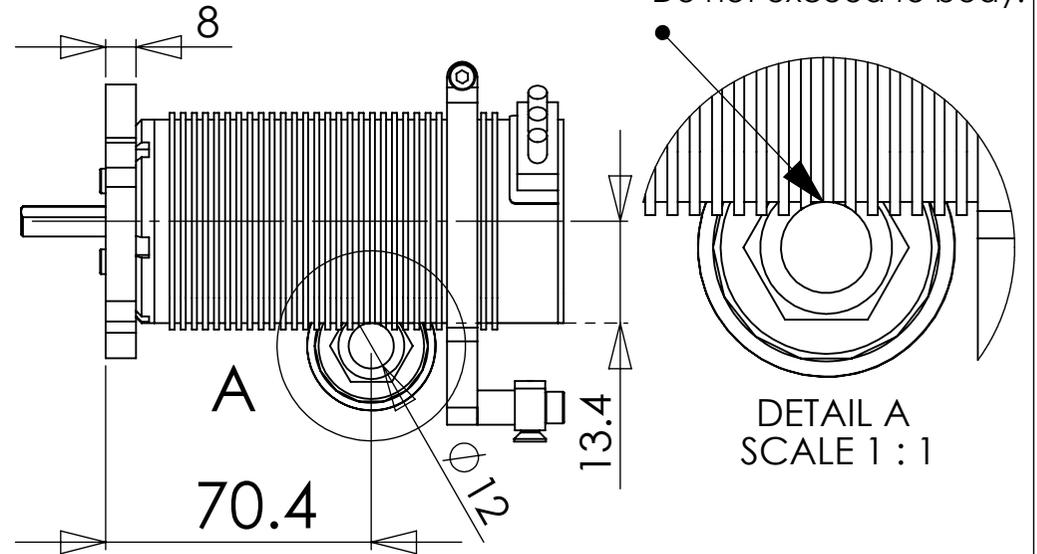

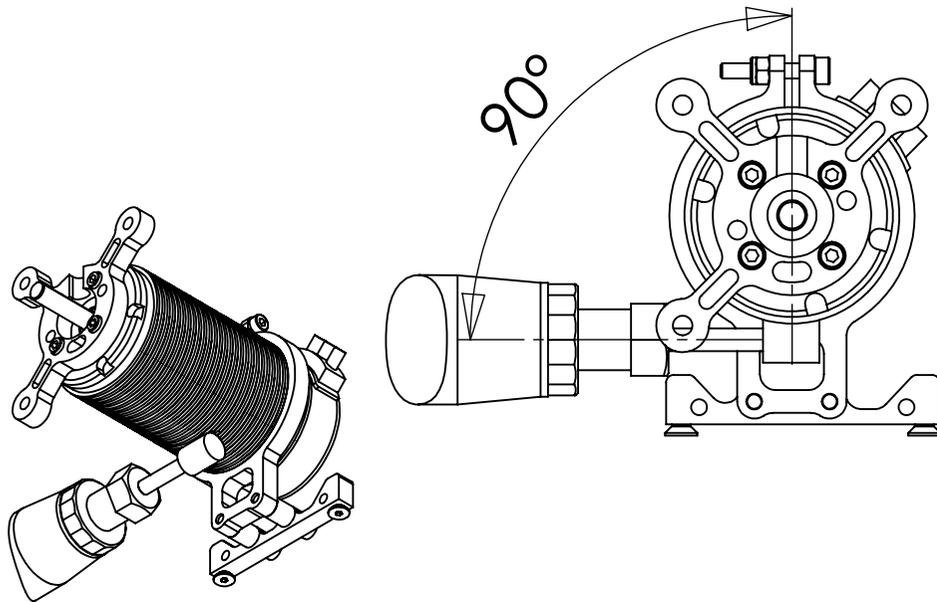

STEP 1

E-Motor Bracket Mounting
Assemble as shown in the diagram below.
Make sure the motor output cables
face towards the front of the car.

STEP 2

Modification guide to prevent rear drive-shaft contact.

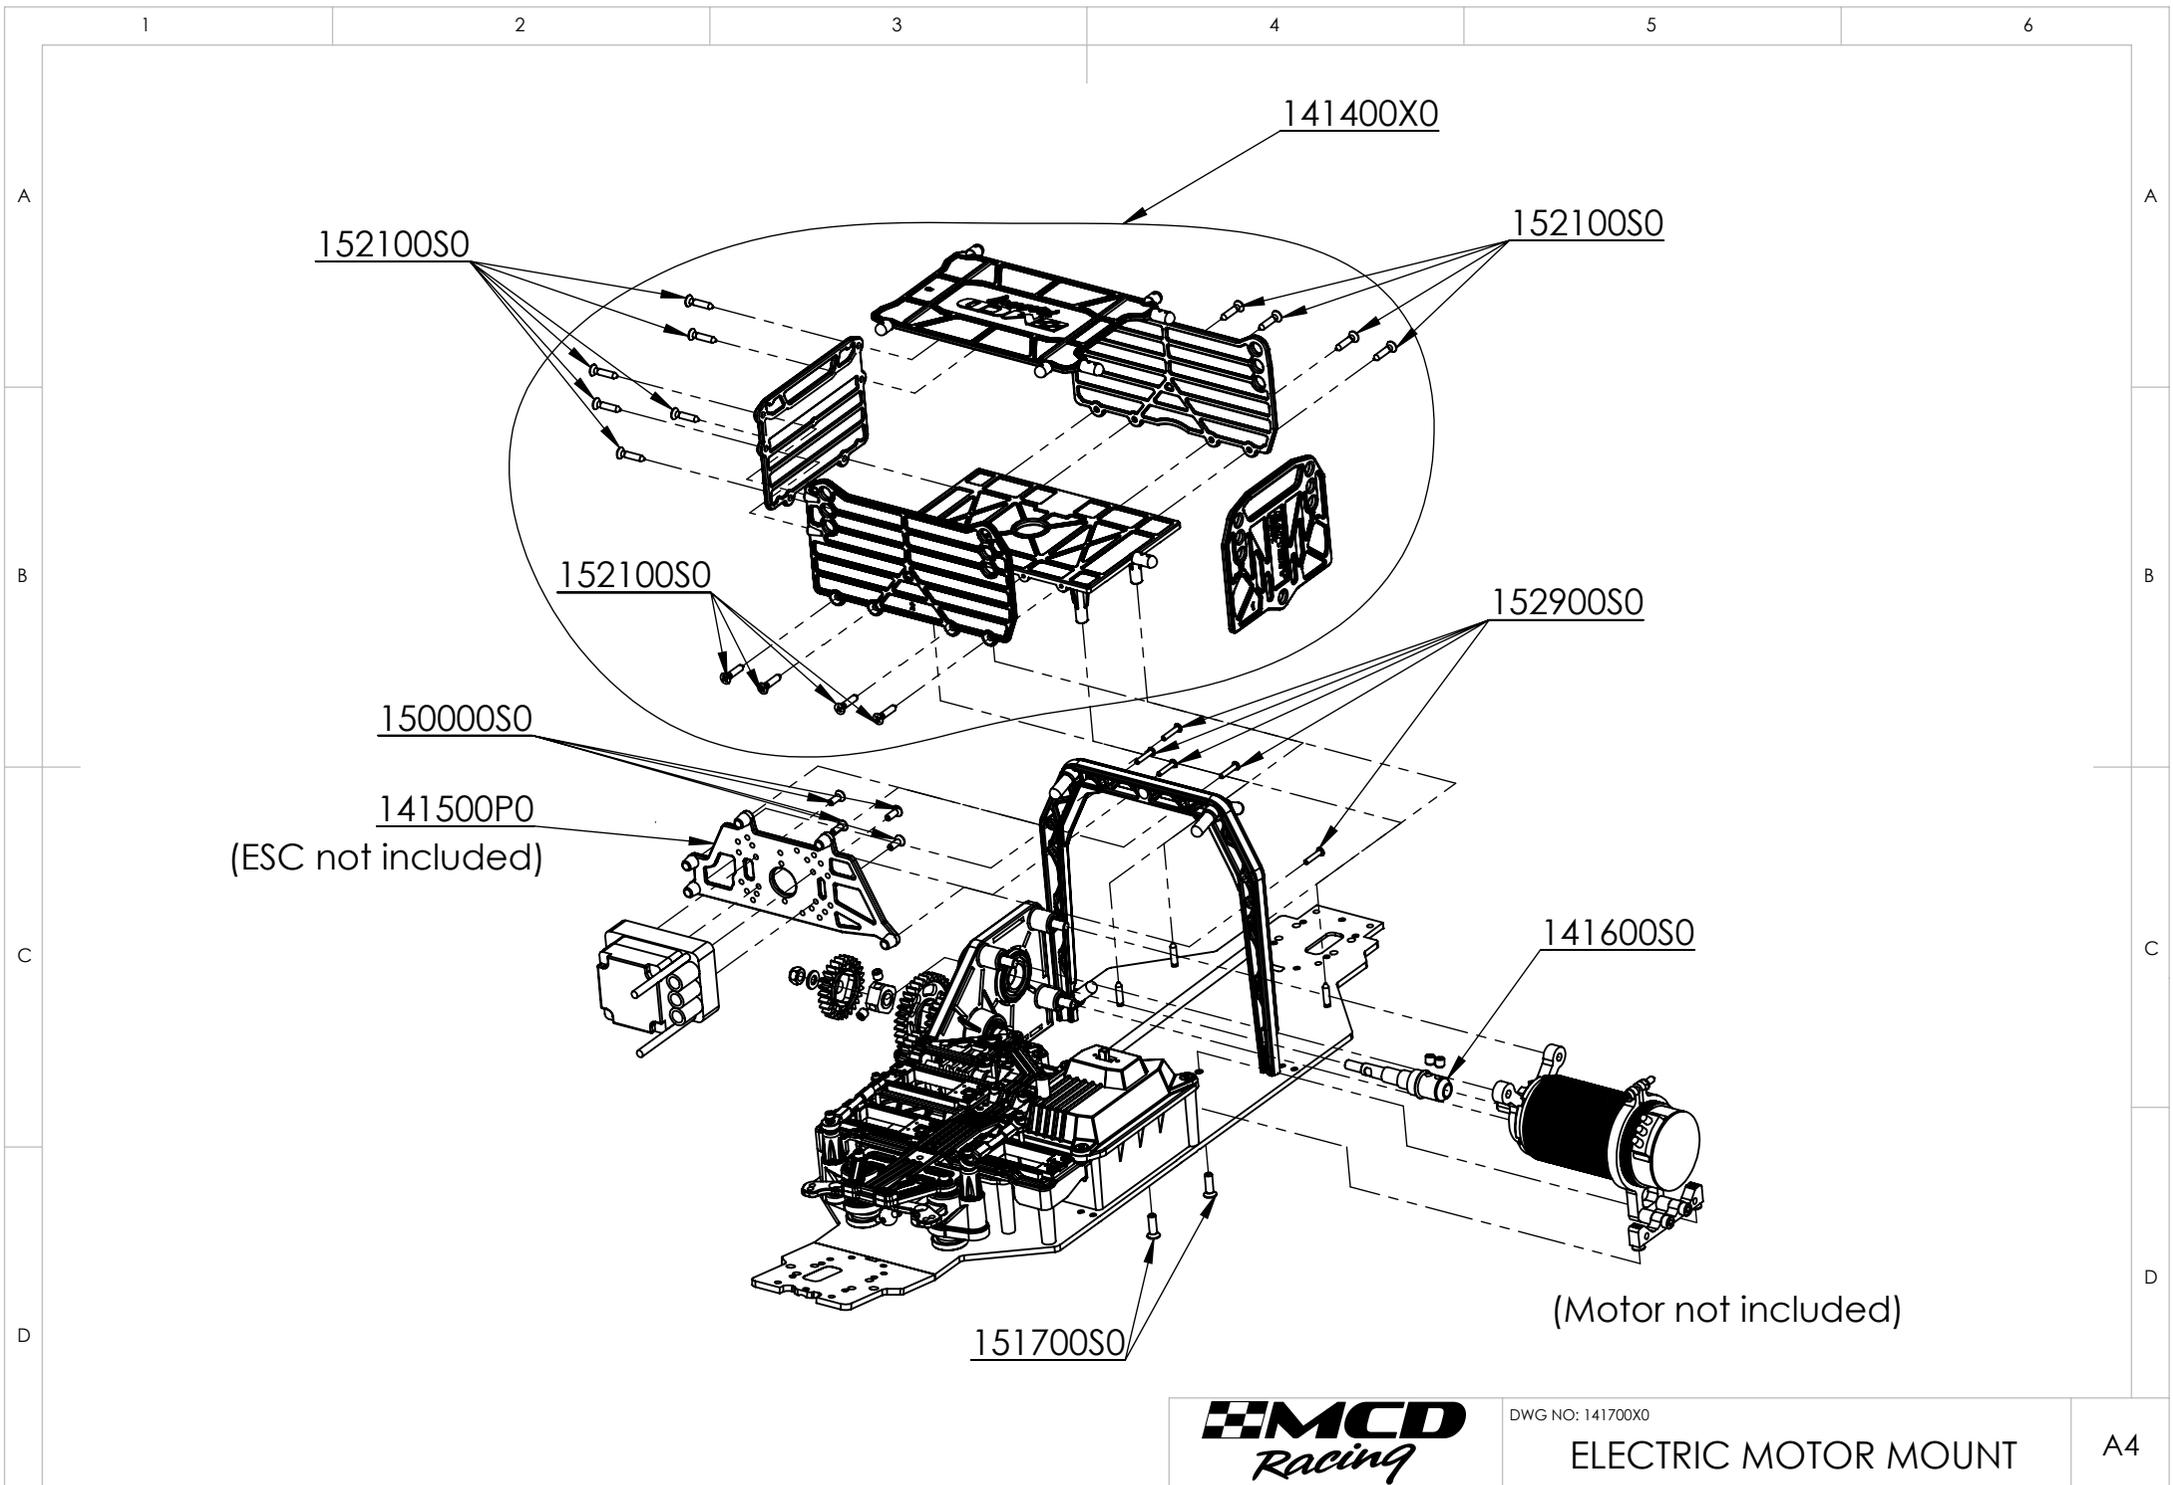

To make the modification we recommend
to use dremmel with 12mm grinding stone
